

Filterclone Dust Collector Models FC 29, 51 & 80

Features

- **Made in New Zealand** All components with the exception of the motors and vibrators are manufactured in New Zealand.
- **Standard models** Alternative sizes available on request.

Model	Number of filter bags	filter area (m ²)	Nominal airflow (m ³ /s)	cfm
29	29	72	2.9	6,100
51	51	127	5.1	10,800
80	80	200	8.0	17,000

- **Quality finish** Galvanised steel used throughout construction.
- **Cyclone section** The Filterclone design incorporates a cyclone section, which separates the bulk of material, leaving only the finer fraction of dust to the filter section to handle.
- **Shaker cleaning** The filter section is cleaned automatically during operation by heavy duty shaker equipment. During the shut down procedure the filter bags are again automatically cleaned to ensure the system is ready for the next start up.
- **Easy service** Servicing can be carried out in adverse weather.
- **Service platform** A service platform comes standard. Ladders and cages are optional.
- **Bin Loading** To handle the large volumes of waste that the Filterclone is designed to cope with; Bin loading systems are generally incorporated in a complete dust collection system.
- **Technical Support** We offer full technical support and appraisals to ensure you get the most out of your system.
